

Table S3. ICH subgroup vital signs responses (n=502)

Variable	Ketamine exposure		P-value
	Exposed (n=86)	Unexposed (n=416)	
ICP >20 mmHg (n=138)	9/16 (56.3)	100/122 (82.0)	0.055
Hypoxia PaO ₂ <80 mmHg	37 (43.0)	154 (37.0)	0.699
Hypothermia (temperature ≤35°C)	13 (15.1)	34 (8.2)	0.402
Hyperthermia (temperature ≥38°C)	0	3 (0.7)	0.922
Heart rate			
Bradycardic (<60 bpm)	14 (16.3)	71 (17.1)	1.000
Tachycardic (>100 bpm)	40 (46.5)	204 (49.0)	0.831
Systolic blood pressure			
Hypotensive (<90 mmHg)	12 (14.0)	48 (11.5)	0.442
Hypertensive (>180 mmHg)	15 (17.4)	96 (23.1)	0.382

Values are presented as number (%). In the ICH subgroup, there were no other statistically significant differences in physiologic measurements between the groups.

ICH, intracranial hemorrhage; ICP, intracranial pressure; bpm, beats per minute.
